

The New Enemy - a clear and present danger to Freedom and Democracy

international / prose / post

Greece has been defeated, vanquished and devastated, not by military force or invasion but by banks, yes, unregulated, parasitic, financially powerful banks! Not even the Nazi invasion of Greece during WWII was as destructive to the Greek nation as the western banking system has been today - FACT! Now think about that for a minute. A once sovereign, democratic free nation has lost its sovereignty, national assets, its right to self-determination and the right to tolerable living conditions for its working and retired population.

Had I described a nation without naming it and the effects of an enemy invasive force which has effectively appropriated everything of value the nation has to offer and enslaved its population then named Greece, you would have hesitated and perhaps in your ignorance dismissed the claim as fanciful or outright nuts. However, I regret to say that it is all the screaming, horrid, truth, as anyone of you are able to verify with the least effort.

So here we are, whether our nations have been attacked by these forces to the same degree as Greece is irrelevant as every western nation is in debt to the same forces that devastated Greece. It should also be noted that these destructive, immoral, unethical BANKS refused to accept rational strategies to allow Greece to recover and repay what is today, after additional loans, an unrepayable debt, so Greece has been thoroughly defeated by financial interests alone, which interests have proven to the entire world that such an attack is far more devastating to a nation and population than traditional warfare. Greeks today are slaves, pure and simple, as we all are to a lesser or greater degree debt-enslaved by DESIGN.

Financial interests today are unregulated and above the law, they use their bought political puppets - every government today serves elite financial minority interests not the people -- to lift all existing constraints/regulations on their activities, avoid national taxation laws and even to facilitate their horrid future designs (TPP, TTIP etc), which would allow these nefarious financial interests more power to devastate wealthy nations and their entire populations.

Think about your OBVIOUS traitorous, lying governments that incessantly deceive the public while serving unrepresentative, undemocratic financial interests and allowing those interests to run roughshod over all of us. I might add that debt-enslavement was engineered after the 60's experience when costs and wages were fair and people enjoyed the freedom those circumstances afforded. That was too much for banking and corporate interests that required compliance, not free people saying no to unfair, oppressive living and working conditions.

Debt-slavery hangs on the thread of costs exceeding real wages, simple as that, and there is no VALID reason that unfair lopsided situations should be allowed to continue, a real representative government's responsibility is to ensure by regulation or otherwise, a balance between wages and living costs. Of what concern is it to the public if a company's profit is reduced from say, \$500 billion to \$100 billion per annum, the difference would fill revenue voids in government coffers and be used for infrastructure projects and services to maintain a healthy, educated, skilled and viable work force.

However, since the 60's financial interests have shrewdly by measured increments, achieved the status they enjoy today, but who would have thought they would use their increased freedoms to devastate entire nations and populations, like Nazis? Well, Greece has proven what the new enemy has in store for the rest of the world and if you think otherwise you are a fool that is unable to see the nose on your stupid, enslaved, ignorant face!
