

## Until Such Time

by zed *Tuesday, Dec 27 2016, 8:29pm*

international / prose / post

It amazes me at times to witness the entire human race avoiding the issue, as though truth were a plague.

Take war for instance, everyone blames everyone else for wars, however, by so doing people avoid the very cause itself. Do you know, or can you guess? Indeed, until humanity learns to avoid aggression and associated tendencies in their own personalities wars will continue unabated as our leaders are merely reflections of ourselves -- and what a fine bunch of criminal psychopaths they make in the world today.

The tendency to war/aggression resides in every human being, in every aggressive word of hatred; if YOU are at war with your neighbour would you expect otherwise from your government? Yes, YOU are to blame; take note, today's leaders would be institutionalised and medicated in any sane society. Which of course refers directly to the body of the plague itself, society.

Consider for a 'moment,' as that is all the time you would give to peace and truthful discourse, that all our problems are of our own making, ALL of them; and if we truly wish to CHANGE the horrendous status quo WE MUST CHANGE OURSELVES FIRST, as together we are society and dominant tendencies will always prevail.

The solution to ALL our social ills is simplicity itself, refuse war and prosecute/wage peace, you could start with your neighbour the next time his dog shits on your lawn, demonstrate peace and a peaceful resolution will become obvious, do this always whenever obvious aggressive tendencies are resorted to by anyone, including our national leaders. It's a matter of priorities, discipline and taking responsibility for your thoughts, actions and Life. Remember, in this way you would finally appreciate that YOU are the WORLD/society.

Have a clear-headed, peaceful day, you would be very surprised by the benefits peace bestows on your well being and your nation.
