

Oz city to stop fluoridating water by popular demand

by mengel Tuesday, Jan 29 2013, 10:30pm

international / prose / post

The north Australian city of Cairns is to cease poisoning its citizens via the water supply. The socially and politically enlightened Mayor of Cairns stated that "*involuntary 'mass medication' must not proceed without community consent.*" The people of Cairns now have a choice, to use Fluoride via the many toothpaste and other products available on supermarket shelves or to avoid this known toxin altogether. Well done people of Cairns; it is no secret that healthy teeth are the result of improved diet and good dental hygiene practices.

Remember, the first national leader to Fluoridate the national water supply was Adolph Hitler and be assured the last consideration for his action was dental health; Fluoride is known to induce APATHY in those exposed to this toxin.

The paralysis of the German population in clear view of the crimes committed by the Nazis is well documented. I would remind readers that Germans were law abiding moral citizens prior to Nazi media and chemical manipulation.

A correspondence exists today in America; the population is totally numb to the almost daily war crimes and other infractions on privacy, rights, freedoms and other social liberties committed by the clearly criminal government. Today the US administration boasts indefinite detention without charge or trial, total surveillance and kill/murder lists, to mention only a few heinous neo-Nazi policies. Indeed, the exact same tactics used in Nazi Germany have been deployed in the USA; media propaganda and chemical manipulation of the population, the effects of which are truly extraordinary, right down to 'genital groping' intrusions on citizens at airports -- not even the Germans would have tolerated that level of personal abuse from the State. Bye, bye, America, your future is plain to see!

Story from the Oz ABC follows:

Cairns council to stop fluoridating water

The Cairns Regional Council has voted to stop fluoridating its water supplies by early next month.

Mayor Bob Manning says it recognises involuntary 'mass medication' must not proceed without community consent.

The Queensland Government last year changed laws to give councils the option not to fluoridate local water supplies.

"It costs about \$300,000 or \$400,000 a year to fluoridate all the supply, so that won't occur but this is not an issue of cost and we're not talking about millions of dollars here," councillor Manning said.

"We should have the process completed, the taking out of the fluoridation, by about mid-February."

Ron Blake from the Australian Dental Association says fluoridating water prevents tooth decay but is not mass medication.

"That's stretching the term a bit," he said.

"It's not mass medication. Fluoride is a natural element and what we want to do is put it in the optimal level that will give maximum benefit and it is safe.

"The science is irrefutable."

*[Note the abuse of language by the Dental Association (corporate spokesperson) representative. Indeed, the toxin Fluoride is a "natural" element among dozens of other highly lethal and toxic perfectly 'natural' elements. The preposterous claim that the "science is irrefutable" is patently untrue -- nature knows best and it is science that is responsible for all the lethal, destructive and increasingly COSTLY pollution on the planet today. **Also, never forget that CHOICE is the most important DEMOCRATIC PREROGATIVE.]***
