

Data Suppression and Censorship Today

by bosey Sunday, Feb 10 2013, 10:18pm

international / prose / post

Since Google avoided heavy penalties and restrictions from the US anti-trust regulator -- by spending \$25 million on 'lobbying' (corruption) internet data 'management' has taken a turn for the worse; Google now does not announce or apologise for new algorithms that disadvantage some sites, chairwoman Eric Schmidt, just approves it and to hell with the rest, as he now owns the regulator -- corruption money talks!

Furthermore, Schmidt/Google has been assisted by his Bilderberg associates that have more to fear from the truth and opposing views than any other group -- ALL independent news/views and dissenting voices are being muffled, backgrounded and suppressed at speed -- make no mistake.

We recently tested various alternative news and other video news sites to which we have log access for tell-tale patterns and discovered that massive censorship is now taking place; for instance, one alt-news site only has hits from ten countries to date when its history indicates over the same period in previous years, hundreds of countries accessing the site! This 'over the cliff' drop in stats is not an organic occurrence, no drastic or sudden change in patterns ever is; it is the clear result of new suppression and censorship policies to limit information to the dominant (media propaganda) discourse. The forces responsible are in literal dread of the truth of their criminal activity becoming widely known; they are terrified, make no mistake about it. Consider the drastic and concerted efforts underway as I write to suppress all 'unmanaged' opposing views and dissenting opinions, especially those supported by incontrovertible evidence.

Now, this situation was expected and the digital underground has already created 'black' channels and networks disconnected from the mainstream internet for the free flow of information to continue uninterrupted -- ruling elites will regret the day they attempted to censor the people's internet, as they are now out of the loop and have no idea what their opponents and opposition are planning, developing and have in store, notwithstanding that anonymity, secrecy and surprise have been traditional methods of digital warfare for decades. Nevertheless, ample loose information was available whereby nefarious forces could compile a very rough picture -- well, no longer and thanks for all the help, Eric, you sweet thing!

[And do not fret, all your fruitless efforts to discover our identities to date will be rewarded -- you will learn who we are (we're closer than you think) when we tighten the nooses around your filthy criminal necks!]
